

LAKE SIDE
FLOOD SOLUTIONS

Hartley Wintney Fire Station

Location: Hartley Wintney, Hampshire

Date: March 2026

Client: Hampshire County Council 

Requirements: Automatic flood resilience for critical community premises

"The installation of the automatic floor barriers was surprisingly simple, especially considering the site's intricate nature... The overall build quality of the barriers appears to be exceptionally robust, offering significant redundancy through multiple seals."

Given the site's usage, which includes heavy vehicle traffic and is typically unoccupied, these barriers serve as a comprehensive solution, further supported by well-thought-out maintenance features.

The design of the barriers is notably straightforward, and their ability to operate without motors or electronic support is a fantastic way to prevent electrical failures and reduce costly UPS expenses.

Overseeing the installation of these barriers has been an immensely fulfilling experience, and witnessing their performance during controlled partition tests is truly impressive".

Conner Jordan
Senior Projects & Maintenance Manager
Hampshire & Isle of Wight Fire & Rescue Service

Key Features:

- 4no. automatic flip-up barriers up to 8m wide to increase the flood resilience of the fire station.
- Liaison and collaboration with Main Contractor to ensure seamless design integration.
- Installation, test and commissioning by Lakeside in-house specialist operatives.
